Comments:					
I performed a complaint inspection at Laurel Mountain Midstream's Springhill #2 Compressor Station. I came unannounced and met Katie Maloy, Staff Env Scientist/Specialist, and John Borris, Team Leader Compression. I observed three compressor engines (2 natural gas and 1 electric). 1 electric and 1 natural gas engines were running. I also observed the Nitco dehydrator and reboiler and drip tanks. I observed no malodors leaving the property. No deviations noted. Facility deemed in compliance.

Abbrv Description:	Odor - Williams Compressor Station		
Long Description:	Complainant said about 10:30 pm last night there was an odor - paint thinner smell. She called Fire Dept they came and went in back of her home and did smell the paint thinner. She said they told her there was enough air to not cause a problem. But couldn't say what would happen if someone lighted a match or lighter. She left for the night. This morning there is no odor but she saw three frac trucks rushing into the Compressor Station. 09/30/2010 Complainant called again today. She is smelling a Strong natural gas smell.		
Site Location:	Williams Compressor Station

Date Investigated: 10/05/2010
Violation(Y/N): No
Investigation Id: 271777

Type: Site Visit

Investigation Description: I spoke with Katie Maley, Environmental Specialist, for Williams about the complaint of on 9/23/10. Ms. Maley was unaware of any problems relating to the Springhill Compressor Station on or about the date of 9/20/10. She had to check with the operator of the station to see if any issues had been reported. The site is permitted for two (2) Cat. G3526LE natural gas fired compressor engines and a Natco .25mm Btu dehydrator. The odor that was said to be coming from the site was that of a paint thinner smell which is not something normally associated with that of a natural gas fired compressor. Ms. Maley reported that the three trucks reported being seen entering the facility the next morning were dump trucks carrying aggregate for use in a construction project.

I spoke with Ms. Maley again on 9/30/10. The site had been manned both 9/20/10 and 9/21/10, but nothing was reported by the operators of the facility as could be causing malodors. No malfunctions or problems had been reported onsite.

I inspected the site on 10/6/10. I met Katie Maley, Environmental Specialist, and John Borris, Team Leader Compression, upon my entry to the site. Observed the three compressor engines (two natural gas and one electric), the Natco dehydrator and reboiler, and drip tanks. Only one of the natural gas engines is currently running. Observed no malodors leaving the property, no deviations, and no violations. Ms. Maley will supply me with all plant blowdowns that have occurred in the recent past and will notify me of all blowdowns in the near future.

Consider complaint closed and resolved.
