Hi Dick

Tim Kuntz is out this week so I have forwarded to Tom Norris in his absence.

Mark

***Springhill Compressor Station Malfunction Report  
Natural Gas Release 6/1/15***

**Company:** Laurel Mountain Midstream, LLC

**Facility:** Springhill Compressor Station

**Date/Time of Incident:** Discovered 6/1/15 at ~8:00 am.

**Date/Time of Report:** Initially Phone call in to Mark Gorog 6/1/15; this report of problem – 6/02/15

**Malfunction/Incident Details:** At approximately 8:00 am on 6/1/15, the Springhill station operator discovered a problem with a dump valve on a liquids collection vessel on a filter system ahead of the station exit meter. The dump valve was stuck open, allowing the gas in the system to vent through the liquid collection vessel to the liquid collection tank at the meter station. (This tank collects any residual liquids from the station exit gas just before they are 'metered' to the main gas line.) All gas released to the tank was released to the atmosphere.

**Estimated Quantity of Gas/Emissions Released:** We are checking to see if we can determine when the dump valve may have first stuck open. There may not be sufficient data to determine the exact time of the start of this release. The release was stopped by the station operator within a few minutes of its discovery.

**Corrective Actions:** Operator corrected the problem, and checked the system.

At this time, no system related cause has been identified, that is, no cause due to physical or electronic control equipment failure.

Thanks,

***Dick Baker***
