Alex,

We added a 2" pipe extension on the dehydrator stack vent, which improves dispersion and reduces ground level impact. I am not aware of any new odor complaints in this recent time period. Also, the operator is responsible for doing a daily odor check, and no odors have been recorded in the most recent 6 month recording period.

Thanks,

Dick Baker

Dick,

As long as the increase in emissions is below the exemption thresholds, we may still be able to exempt the changes to the dehydrator, even if the reboiler is replaced. Have there been any recent odor issues from the dehydrator? There was some talk about making changes to the configuration to avoid any issues in the future during the GP-5 review.

Alex
